

SAMPLE REPORT

KNOW YOUR BUSINESS - PESTEL ANALYSIS THROUGH INDUSTRY VISIT

Subject: Business Environment

Course: B.B.A Semester III

BUSINESS VISITED

ABC Supermarket, Junagadh

Business Type: hotel

Owner: Kashyap kambaliya

Student Group: Dobariya Dipali , Dobariya Bhumika, dafada shraddha

Date of Visit: 15-aug-2026

Sample academic report for the Business Environment activity.

1. Business Profile

Hotel Krishna & Garden Restaurant is a well-known mid-range hospitality establishment operational for nearly a decade near the HP Petrol Pump on the busy Junagadh-Rajkot Highway in Vadal. The business efficiently integrates diverse consumer services by combining comfortable air-conditioned lodging accommodations with an expansive, 100% pure vegetarian multi-cuisine garden restaurant. It features essential amenities such as dedicated parking, children's play areas, and an outdoor swimming pool with water slides, allowing it to successfully serve transit commuters, long-distance highway pilgrims, and local families seeking dining and recreational options.

2. Objective of the Visit

The primary objective of this field visit was to conduct an on-site operational assessment of Hotel Krishna & Garden Restaurant in Vadal to understand how a highway hospitality business functions in a real-world environment. The visit aimed to observe the practical workflow and synchronization between its accommodation front-desk, food and beverage management, and outdoor recreational assets. Additionally, the objective included identifying the real-time external macro-environmental challenges and opportunities that influence the property's daily customer service delivery and overall market sustainability for strategic academic reporting.

3. Business Introduction

Hotel Krishna & Garden Restaurant stands as a prominent landmark on the Saurashtra tourism corridor, specifically serving travelers heading towards the Girnar pilgrimage site and Sasan Gir National Park. The business focuses on delivering affordable family-friendly hospitality, regional authenticity, and modern recreational facilities within a single property. By leveraging its highly strategic highway location, the hotel successfully caters to both short-duration transit dining demands and large-scale regional social gatherings, making it a vital player in the local tourism ecosystem.

4. Interview Summary

During the visit, an informal interview was conducted with the manager and frontline staff to gather operational insights regarding the property's management style and market adaptabilities. The staff highlighted that their core business strength lies in maintaining strict food hygiene and authentic vegetarian tastes which helps retain a loyal regional customer base. However, they also shared critical operational challenges such as extreme seasonal fluctuations in room occupancy, rising fuel costs for food preparation, and the continuous need for digital marketing upgrades to effectively compete with new highway competitors.

5. PESTEL Analysis

The PESTEL framework provides a structured evaluation of the external macro-environmental forces impacting the strategic operations of Hotel Krishna & Garden Restaurant. By summarizing these forces in the table below, the business can easily understand current market trends and design long-term strategies to maintain high service delivery standards on the busy highway corridor.

Force	Strategic Impact
Political	Government initiatives for Girnar and Sasan Gir tourism boost traveler inflow.
Economic	Seasonal tourist cycles cause high volatility in room occupancy and food revenue.
Social	High regional preference for strict 100% pure vegetarian catering and family facilities.
Technological	Increasing dependence on OTA booking platforms like Agoda, Trip.com, and UPI payments.
Environmental	High water usage for swimming pool and dust pollution management due to highway location.
Legal	Strict compliance required with FSSAI regulations, fire safety, and state labor laws.

6. Political Factors

The business operations of the hotel are significantly influenced by the Gujarat Government's active initiatives to promote regional religious and wildlife tourism around Junagadh and Gir forest. Government policies regarding national highway expansions, zoning regulations, and infrastructure developments directly impact the hotel's physical accessibility and roadside visibility. Additionally, the business must continuously realign its pricing structures with frequent modifications in the Goods and Services Tax (GST) slabs mandated for commercial lodging and food courts.

7. Economic Factors

The economic sustainability of the hotel depends heavily on the disposable income and weekend leisure spending habits of the middle-class population traveling across Saurashtra. The business experiences high financial volatility due to seasonal tourism cycles, where winter months generate peak revenues while hot summer months face low room occupancy. Furthermore, rising inflation in commercial LPG cylinders, electricity tariffs, and daily local grocery market prices puts constant pressure on the hotel's operational profit margins.

8. Social Factors

The hotel achieves maximum market alignment by strictly adhering to the regional cultural preference for 100% pure vegetarian catering, including traditional Kathiyawadi and Punjabi cuisines. Modern social trends show that contemporary family travelers expect clean highway amenities, well-maintained restrooms, and safe recreational spaces like swimming pools for children. Moreover, the local community's preference for celebrating weddings and corporate events at spacious highway locations creates a steady stream of domestic event business.

9. Technological Factors

The property increasingly relies on modern digital technologies to maintain its market visibility and manage smooth daily operations. It actively utilizes online travel agent platforms like Agoda, Trip.com, and Justdial to capture room bookings from travelers searching for hotels outside the main city limits. The integration of rapid UPI digital payment systems ensures smooth, hassle-free checkout experiences for transit commuters, while social media platforms are leveraged to promote seasonal food festivals and banquet facilities.

10. Environmental Factors

Operating directly on a major highway exposes the open-air garden restaurant to continuous automotive dust and air pollution, requiring non-stop cleaning and physical upkeep. The presence of an on-site swimming pool and large green lawns creates high water consumption demands, which becomes a severe challenge during dry summer months due to local groundwater depletion. Additionally, its proximity to the greater Gir eco-zone requires strict compliance regarding noise control and eco-friendly solid waste management.

11. Legal Factors

Hotel Krishna must strictly comply with the stringent regulations set by the Food Safety and Standards Authority of India (FSSAI) to maintain its health and hygiene certifications. The business is also legally bound by Gujarat state labor laws regarding minimum wages, working hours, and safety insurance for its seasonal and permanent workers. Furthermore, holding valid commercial building permissions, fire safety certificates, and local municipal NOCs is mandatory to prevent any legal interruptions.

12. Key Findings

The field visit revealed that the hotel possesses an exceptional geographical advantage that guarantees a steady flow of transit travelers and local event bookings. The integration of recreational facilities like water slides with a dining space successfully attracts family crowds that standard highway dhabas cannot capture. However, the business displays a heavy vulnerability to seasonal tourism drops and requires more structured training for its temporary staff to elevate overall service consistency.

13. Major Challenges

The most prominent challenge faced by the management is mitigating the sharp revenue decline experienced during the off-peak summer seasons when pilgrimage travel decreases. Rising operational costs due to food inflation and high electricity consumption for AC rooms and pools also squeeze profit margins. Additionally, intensifying competition from newly constructed modern food plazas and restaurants along the same highway creates constant pressure to lower prices.

14. Future Opportunities

The hotel can explore significant growth by introducing specialized weekend staycation packages and discounted multi-day tour bundles tied to Girnar and Sasan Gir tourism. Upgrading the banquet facilities with advanced audiovisual tech could attract premium corporate conferences and high-end private celebrations from nearby cities. Implementing solar power infrastructure and eco-friendly rainwater harvesting systems could also drastically reduce long-term utility costs.

15. Recommendations

It is highly recommended that the management invests in automated water filtration and solar heating systems to optimize utility expenses for the swimming pool and garden areas. Introducing a structured digital customer relationship management (CRM) system would help collect direct feedback and encourage repeat bookings. Furthermore, launching targeted social media marketing campaigns ahead of peak holiday seasons will maximize room occupancy and event venue utilization.

16. Learning Outcomes

This field visit provided invaluable practical exposure to understanding the complex, real-world execution of macro-environmental PESTEL factors in the hospitality industry. It demonstrated how external elements like government tourism drives, inflation, and cultural tastes directly dictate the daily operational choices of a business. The experience also enhanced critical thinking, on-site data collection skills, and the ability to evaluate business sustainability beyond theoretical concepts.

17. Conclusion

In conclusion, Hotel Krishna & Garden Restaurant is a highly viable and strategically positioned business that effectively fulfills the hospitality needs of the Vadal-Junagadh highway corridor. While it faces notable macro-environmental challenges like seasonal income fluctuations and high utility inflation, its strong regional brand value and multi-functional infrastructure provide a solid foundation. By adopting digital marketing upgrades and sustainable resource management, the business is well-equipped to maintain its market growth.

18. Photographs and Visit Evidence

Interview Details

Owner: Kashyap kambaliya **Designation:** Owner

Business: Hotel Krishna & Garden restaurant

Interview Date: 15 aug 2026 **Duration:** 30 min

Student Group: 3

Faculty: Prof. Priyal Kanabar, Assistant Professor, Faculty of Management and Commerce, Noble University, Junagadh
